Application Number: 10/720,985 Reply to O.A. of October 31, 2007

AMENDMENTS TO THE CLAIMS

Dkt. No.: 14306.1

This listing of claims will replace all prior versions, and listings, of claims in the application.

- 1-12. (Cancelled)
- 13-39. (Withdrawn)
- 40. (Currently Amended) A method for administering an injectable product from a reservoir, the method comprising:
 - providing a first volume and a second volume, wherein the volumes are adapted to contain a fluid:

placing the volumes in fluid communication; and

- decreasing the volume of the first volume, thereby causing the amount of fluid in the second volume to increase, which increases the volume of the second volume and causes the administration of injectable product from the reservoir;
- wherein the first volume is decreased by urging a first piston against the first volume; and wherein the increasing second volume drives a second piston which causes the administration of injecteable product from the reservoir.
- 41. (Previously Presented) The method of claim 40, wherein the fluid is a liquid.
- 42. (Cancelled).
- 43. (Currently Amended) The method of claim 42 40, wherein a spring urges the first piston.
- 44. (Cancelled).
- 45. (Currently Amended) The method of claim 44 40, wherein an area of contact between the first piston and the fluid in the first volume is larger than an area of contact between the second piston and the fluid in the second volume.

Application Number: 10/720,985 Reply to O.A. of October 31, 2007

46. (Currently Amended) The method of claim 44 40, wherein the second piston has a piston rod operably coupled to a third piston displaceable through the reservoir and in contact with the

Dkt. No.: 14306.1

injectable product.

 $47. \ \ (Previously\ Presented)\ \ The\ method\ of\ claim\ 40,\ further\ comprising\ creating\ a\ pressure$

differential between the first volume and the second volume when the first volume is being

decreased.

48. (Previously Presented) The method of claim 40, further comprising providing an injection pen

or syringe casing generally enclosing said volumes.
